                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A; Experimental source: seed C; Comment: Abrin-a is more toxic than ricin. The toxin consists of an A chain, which inttaining receptors on the cell surface. The A and B chains are linked by a single disulficence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A; Molecule type: protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Structure and activity of an active site substitution of ricin A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             'X-ray structure of recombinant ricin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Biol. Chem. 262:5398-5403(1987).
                                                                                                                                                                                                                                                                                                                                     protein synthesis through the catalytic inactivation of 60S ribosomal subunits. It acts as a glycosidase that removes a specific adenine residue from an exposed loop of 28S ribosomal RNA. As this loop is involved in the binding of elongation factors, the modified ribosomes are unable to support protein synthesis. The A chain can inactivate a few thousand ribosomes per minute, thus inactivating them faster than the cell can make new ones. A single A-chain molecule can therefore kill an animal cell. The B chain binds to cell receptors and facilitates the entry into the cell of the A chain; B chains are also responsible for cell agglutination (Lectin activity). It binds to beta-D-
                 galactopyranoside moieties.

GATALTYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at (CATALTYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at (Specific adenosine on the 28s rrna.

SUBUNIT: Disulfide-linked dimer of A and B chains.

SUBUNIT: Disulfide-linked dimer of A and B chains.

SUBUNIT: Disulfide-linked dimer of A and B chains.

SUBUNIT: The B chain is composed of two domains, each domain consists of 3 homologous subdomains (alpha, beta, gamma).

PTM: THE MAJOR A-CHAIN IS GLYCOSYLATED ONLY IN POSITION 45 AND 'NINGRATIVE IN THE N-TERMINAL SECTION, BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: Ricin is higly toxic to animal cells and to a less extent to plant cells. The A chain is responsible for inhib protein synthesis through the catalytic inactivation of 60s protein synthesis through the 60s protein syn

I SUBUNIT: DISULFIDE LINKED DIMER OF A AND B CHAINS.

DOMAIN: THE B CHAIN IS COMPOSED OF TWO DOMAINS, EAC CONSISTS OF 3 HOMOLOGOUS SUBDOMAINS (ALPHA, BETA, GOISMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO TINACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.

SIMILARITY: Contains 2 ricin B-type lectin domains.

SUBUNIT: DISULFIDE-LINKED DIMER OF A AND B CHAINS.

SUBUNIT: DISULFIDE-LINKED DIMER OF A AND B CHAINS.

DOMAIN: THE B CHAIN IS COMPOSED OF TWO DOMAINS, EACH DOMAIN CONSISTS OF 3 HOMOLOGOUS SUBDOMAINS (ALPHA, BETA, GAMMA).

SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.

SIMILARITY: Contains 2 ricin B-type lectin domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FUNCTION: THE A CHAIN IS REPONSIBLE FOR INHIBITING PROTEIN SYNTHESIS THROUGH THE CATALYTIC INACTIVATION OF 60S RIBOSOMAL SUBUNITS BY REMOVING ADENINE FROM POSITION 4,324 OF 28 S RNA. ABRIN-A IS MORE TOXIC THAN RICIN.
FUNCTION: THE B CHAIN IS A GALACTOSE-SPECIFIC LECTIN THAT FACILITATES THE BINDING OF ABRIN TO THE CELL MEMBRANE THAT FRACILITATES THE BINDING OF ABRIN TO THE CELL MEMBRANE THAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PRECEDES ENDOCYTOSIS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S32430;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              novel type 2 ribosome-inactivating protein from the bark of Sambucus nigra L.";
Plant Mol. Biol. 22:1181-1186(1993).

-i- FUNCTION: NON-TOXIC TYPE 2 RIP WHICH STRONGLY INHIBITS MAMMALIAN PROTEIN SYNTHESIS BUT DOES NOT AFFECT PLANT NOR BACTERIAL PROTEIN SYNTHESIS. THE A CHAIN IS RESPONSIBLE FOR INHIBITING PROTEIN SYNTHESIS THROUGH THE CATALYTIC INACTIVATION 0F 60S RIBOSOMAL SUBUNITS BY REMOVING ADENINE FROM POSITION 4,324 OF 28 S RRNA. THE B CHAIN IS A GALACTOSE-SPECIFIC LECTIN THAT FACILITATES THE BINDING OF NIGRIN B TO THE CELL MEMBRANE THAT PRECEDES
